

Determine HIV-1/2 Ag/Ab Combo

Determine HIV-1/2 Ag/Ab Combo is a breakthrough, fourth generation, rapid in vitro immunoassay for the qualitative detection of HIV p24 antigen as well as antibodies to HIV-1 and HIV-2 in serum, plasma and whole blood.

The p24 antigen is produced during the first few weeks of HIV infection and is detectable before HIV antibodies are produced, making it an ideal marker in aiding early HIV diagnosis. Due to separate signals for HIV Ag and anti HIV Ab, **Determine HIV-1/2 Ag/Ab Combo** provides determination of the infection phase and enables the identification of acute HIV infection. Based on testing standard seroconversion panels, the Determine Combo test detected HIV infection several days earlier than the HIV-antibody only product. **Determine HIV-1/2 Ag/Ab Combo** is quick and easy to use, delivering clear, dependable results in just 20 minutes.
