## Features & Benefits

### Determine HIV 1/2

**Determine® HIV-1/2** is an in vitro, visually read, qualitative immunoassay for the detection of antibodies to the Human Immunodeficiency Virus Type (HIV-1) and Type 2 (HIV-2) in human serum, plasma and whole blood.

With its simple one-step procedure for serum/plasma, two step procedure for whole blood, **Determine® HIV-1/2** is quick and easy to use, delivering clear, dependable results in just 15 minutes.

By detecting all known subtypes of HIV, **Determine® HIV-1/2** will help healthcare workers across the world diagnose individual infection, prevent mother-to-child transmission, monitor HIV prevalence and screen blood donations.

Scientifically engineered to provide dynamic performance in a rugged and robust format, **Determine® HIV-1/2** can be shipped, stored and used in nearly any environmental condition (2°C-30° C), even where there is no power or water.

Easy to use and highly flexible, **Determine® HIV-1/2** requires minimal training, no equipment and can be relied upon for fast, accurate diagnosis in the most basic of healthcare settings.

Refrigeration storage is not required with **Determine® HIV-1/2** and it has built in flexibility to be used with whole blood or serum/plasma, collected either by a fingerstick or venipuncture.
